GENERAL INTRODUCTION

This volume consists of two documents, a bibliography of published, unpublished, and current research work among fishermen and in fishing communities in the United States, its territories and possessions, and a directory of the researchers who have performed this work or who are interested in these subjects. Along with four appendices, the entries in the bibliography and directory were obtained through a variety of approaches: a response form mail-out; literature and data bank searches; and a more general, network-based search performed by the editors. A list of the sources and data banks which we used appears in the appendices, as well as a list of other bibliographical works on this general subject. The remaining appendices provide materials for updating and improving the bibliography and directory.

Our particular concern in this volume was to identify those works and individuals in the social sciences which had not heretofore been brought together in one place. Since there is at present a fairly well developed and indexed body of information on marine and fisheries economics, we have excluded economics from this volume except for those works or individuals which have a strong orientation to other social scientific studies.

A second concern was to produce a volume which would be of use to the Regional Fishery Management Councils in the incorporation of the social sciences into their management activity. This bias is reflected in the indexing structure, as set out below. Because of this Regional Council orientation, we concentrated on what we felt were the more fishery management-related social science disciplines such as anthropology, sociology, and political science. With this orientation we have necessarily underemphasized history, archaeology, and other areas of study. We hope to more fully address these areas in subsequent works.

We have included in the bibliography works from popular literature and works of a general social scientific or maritime nature even if they make no direct or specific reference to fishermen or fishing communities. We felt that these works would provide a broader perspective and aid in the grounding of fishery-related research within more comprehensive marine and social scientific contexts. These works are noted in the text.

Because of limitations of time and resources, we have not indexed the entries by subject or discipline; nor have we made any attempt to annotate the entries in the bibliography. We hope to accomplish these tasks in future editions. The present listings are indexed by Fishery Management Council regions and then by each state within these regions. In addition, each index includes a "Miscellaneous" category to aid in

locating works dealing with non-Council areas and states.

In part due to these same limitations, we have not separated works dealing with commercial fishing from those dealing with recreational fishing. The focus of the works on the following pages is on the people themselves who are involved in fishing systems, many of whose activities and motivations are difficult or impossible to categorize. We may make some attempt in future editions to add more specific interest-related indices.

These documents constitute only an initial foray into the subject of fishery-related social science in the U.S., its territories and possessions. They will require continual updating, expansion, and refinement. We have included specific materials for these purposes in the appendices. The most up-to-date information may be obtained by corresponding directly with the researchers themselves. We would greatly appreciate any additional references, information, or suggestions which might make future editions of the bibliography and directory more complete and more useful.

BIBLIOGRAPHY OF WRITTEN WORK AND CURRENT RESEARCH

BIBLIOGRAPHY
INTRODUCTION

The bibliography portion of this volume includes published and unpublished work, and current research projects. These are listed alphabetically by author/researcher and, in the case of anonymous works or popular literature with no by-line, under the name of the publication in which the work appeared.

There are two indices accompanying the bibliography. One lists the entries according to the geographical area with which they are concerned, divided first by Regional Council area and then broken down by state. Because of the general nature of some of the works, not all of the entries are listed under this system. The reader may benefit from a general perousal of the bibliography. Alternatively, the bibliography may be entered by first consulting the indices in the companion directory--which list the authors/researchers by present location and area of interest--and then entering the bibliography through the name of the author/researcher. Also, a work whose title refers broadly to "New England", for example, will be included only in the "New England - General" index category and will not be listed under each individual state. Therefore, readers interested in works concerning a particular state should also check that region's general index listing. This is generally true for the indexing in both the bibliography and the directory.

The second index following the bibliography lists current research projects by Council regions and then by state. Where possible, the research project entries list the anticipated completion date of the project, and whether project reports are available. In addition, both the written work index and the current research index include a "Miscellaneous" category to aid in locating works dealing with non-Council areas and states.

DIRECTORY OF RESEARCHERS

DIRECTORY
INTRODUCTION

The directory portion of this volume is intended for use by the Regional Fishery Management Councils, resource managers, researchers, and others in locating those who may serve as sources of expertise, assistance, information, or common interest. The primary set of individuals in the directory consists of those who are both presently located in the United States and who have performed research among fishing or coastal populations in the United States and its territories and possessions. Also included are those who are presently at a U.S. institution and have expressed an interest in appearing in the directory regardless of the geographical location of their marine-related research; certain individuals who could provide information or expertise even if they are not located or have not worked in the United States; and those who did not respond to the questionnaire but who have relevant interests or research experience of which we were aware.

The directory is arranged in alphabetical order. Each entry includes present affiliation, address, and phone numbers to the extent that they were made available to us. Also listed are the subject and geographical interests of the researcher. This information was obtained from the response forms, in which case it was quoted directly, from summaries in professional directories, and from other material.

There are two indices accompanying the directory. One indexes the entrants by their stated geographical area of interest, divided first by Regional Fishery Management Council areas and then broken down by state. This listing includes a "Miscellaneous" category to aid in identifying researches who are concerned with non-Council areas and states. The other lists the entrants state by state according to their own present location, including a final category for researchers located in foreign countries. For references to research and publications by those listed in the directory, the reader should refer to the bibliography, which is arranged alphabetically by author/researcher.
